Subject: FW: NEW Weekly Update submittals due by COB/today - May 8, 2017
Date: Wednesday, May 10, 2017 8:30:49 AM

Mike, I suggest adding the first, shorter paragraph to the Wilcox write-up.

Some additional clarification.

This should satisfy the question.

Based on our review of the data, sample results collected from the property do not exceed levels requiring an immediate response due to health concerns. At this time, the residential property is vacant, and there is no current exposure.

If the above statement is not enough, then the following language can be used. This may be too much detail and will need to be edited.

Some data results are above human health screening levels. Results above the human health screening levels do not necessarily indicate that a risk exists, but that there may be a potential for risk and further investigation and evaluation through a human health risk assessment to determine the potential long-term health risks is needed. Until a complete site investigation and human health risk evaluation are complete, the location of the contamination, the amount of the contamination, and the potential long-term health risks associated with that contamination is unknown. The human health risk evaluation will provide information on the potential health risks that these contaminants may pose over a lifetime of exposure and is expected to be completed in 2020.

Wilcox Oil Company – Resident Letter: At the request of the resident, the EPA will be sending a letter summary of the data collected from his property thus far during the week of May 15, 2017. Although individual updates have been provided during multiple correspondence, both letter and in-person, the request is to have one summary letter for all current data.

Subject: NEW Weekly Update submittals due by COB/today - May 8, 2017

Importance: High

***Please submit any items you have for the “weekly update”. Thank you.**

Please pay attention to the dates.

RPMs: Please submit your Weekly Updates to me by COB/today – May 8, for the week of May 15 - 19, 2017.

Description from 6XA:

- Bullets don’t work. They need more information than that. Each write up should be a few sentences of pertinent information.
- Each write up has a title with a tag at the end as to what it is. Such as -- Letter -- Permit -- FOIA – conference call --
- As you will see in the examples below, include any impact of this item not getting done. That is the real issue on many of these things and can impact the review.
- **The items you include are for the week of May 15 - 19.**
- This report should include things “**you intend to do**” or “**plan to do**” such as: Public Meetings, Conference Calls, Meetings with outside parties, Calls and meetings with PRPs and elected officials and city managers, Letters, Petitions, Permits, Permit Objections, Permit Approvals, FOIAs, Congressional Responses and Legal Case Sentencing. Also include such things as Webinars and Speaking engagements by you or your staff.
- Your weekly updates need to have geographic information and details, such as addresses, city and state names, etc...

Examples from our last report:

Sol Lynn Superfund Site, Houston, TX - Start of Field Work

On May 8, 2017, EPA intends to start field work for the Sol Lynn site. The Texas Commission on Environmental Quality will participate in this event. Field work will include gauging of shallow water-bearing zones at the site to determine the potential for indoor vapor intrusion in the nearby buildings. The Remedial Project Manager is also making arrangements with the EPA Houston laboratory for analytical services and equipment for future indoor air sampling at the site.

Eldorado Chemical Co, Inc. Superfund Site – Meeting

On May 9, 2017, EPA, along with the Texas Commission on Environmental Quality, Texas Department of State Health Services, U.S. Geological Survey, and Edwards Aquifer Authority, intends to meet with residents of the Bridlewood Park Home Owners Association (HOA), at the City of Live Oak Justice Center, from 5:30 - 8:30 pm. The Bridlewood Park HOA had requested a site update from the EPA, as part of their quarterly HOA meeting for the residents. Information on Remedial Investigation/Feasibility Study activities and community involvement opportunities will be shared.
